

WHAT IS CLAIMED IS:

1. A speaker apparatus comprising:

a speaker unit including a main converter for converting an electrical signal into mechanical vibration, a vibration plate for emitting sound waves to the front side of the main converter, and a frame fixed to the converter, for vibratably supporting the vibration plate from a rear side thereof;

a compensation converter fixed to a rear side of the main converter, for converting an electrical signal to mechanical vibration, the compensation converter being smaller and lighter than the main converter; and

a compensation mass body lighter than the vibration plate, for serving as a load of mechanical vibration of the compensation converter.
